

The Latest Way to Profit from Rental Markets

RxEAL is a long awaited solution for rental security deposit protection. It is a platform for trustless deposit storage and dispute resolution, focusing on real estate and automotive industries. RxEAL does not take away business from existing service providers, on the contrary - the RxEAL solution creates added value, replaces costs and saves time for the world's largest rental markets.

Along with the rise of sharing economy and other socio-economic developments, people rent more flats and cars every year.

The more people rent, the more they have arguments about security deposits.

50% of all security deposits globally are subject to disputes that destroy value for everyone — both lessors and their lessees.

Billions of EUR are annually lost due to disputes globally.

The RxEAL solution benefits both sides of rental transactions

Lessor	Lessee
Added value to the rental product, creating a competitive advantage in the market.	Security deposit does not need to be handed over to an unknown lessor.
Increased customer base by attracting the rapidly growing cryptocurrency community.	Equal control over the deposit together with the lessor.
Improved reputation and the level of trust by becoming completely transparent with clients.	Any changes or withdrawals from the deposit must be mutually approved.
Introducing a new blockchain solution is great for marketing communication.	Almost immediate deposit return.
Significantly reduced dispute rates. Dispute resolution cost is less than 10 USD.	
The possibility to profit from cryptocurrency price appreciation if selecting fiat currency denominated deposit type.	

Why will it work?

It is smart

Within the RxEAL platform users are able to generate smart contracts based on terms both parties have agreed on.

It is secure

The contract will ensure that the deposit amount is stored securely on the Ethereum blockchain throughout the course of the agreement.

It is independent

RxEAL will provide a decentralised and independent arbitrage conducted by qualified members who earn RxEAL tokens (RXL) for resolving disputes.
